

Your workplace, your MAKSPEC™. Creating a clean workplace starts with Toray uniforms.

MRSA and other highly virulent bacteria are now a growing concern in a variety of workplaces. First, "hygiene" is a must. This is probably the most important measure required in the medical, healthcare, and food industries. Toray's antibacterial fabric "MAKSPEC™", with its outstanding antibacterial properties for uniforms, nursing wear, and bedding materials, supports the creation of a clean and safe workplace.

The antibacterial agent in MAKSPEC™ is diffused into the fibers.

Antibacterial

- Successfully developed a product that is effective against a variety of bacteria.
- Excellent antibacterial properties against Staphylococcus aureus (MSSA), Methicillin-resistant Staphylococcus aureus (MRSA), Klebsiella pneumoniae, Pseudomonas aeruginosa, and E. coli that meet SEK standards. Safety

Safety

- Compliant with SEK standards.

Durability

- Demonstrates excellent resistance to industrial laundering.
- Withstands over 50 industrial washes.

Japan Textile Evaluation Technology Council
Certification number: 006SB98

Antibacterial

(Prevents the growth of bacteria on fibers)
Agent: Organic compound (pyridine)
